

Mineral Groups Activity Part 2

Now that you know what the mineral groups are and what is found in their formula, you will go on a scavenger hunt through your textbook. Starting on page 196 is a table of minerals with their chemical formulas. For this activity you must:

1. Find examples of each mineral group.
2. Write down the chemical formula for the group.

There may be more minerals in each group than space provided in the tables.

| Silicates | |
|------------------|------------------|
| Mineral Name | Chemical Formula |
| | |
| | |
| | |
| | |

| Carbonates | |
|-------------------|------------------|
| Mineral Name | Chemical Formula |
